There is No Wrong Way There is No Wrong Way

*There is no wrong way for plants to grow up
What does growth mean to you?*

Manipulating the direction of stretching roots is not help, education, nurture or love.

*Overly protecting plants, planting in a tiny and stuffy pot
and giving them the wrong environment does not make them greener.*

All plants have different types of roots.

Some are tangled or straight, thinner or thicker and shorter or longer.

None of these roots look the same and each of the roots stretches out differently.

However, they all know what they are going to be at the end. They all grow up anyhow with a certain look.

Who makes plants grow and greener?

Do the sun, breeze, soil and rain do it?

Are they giving themselves in moderation?

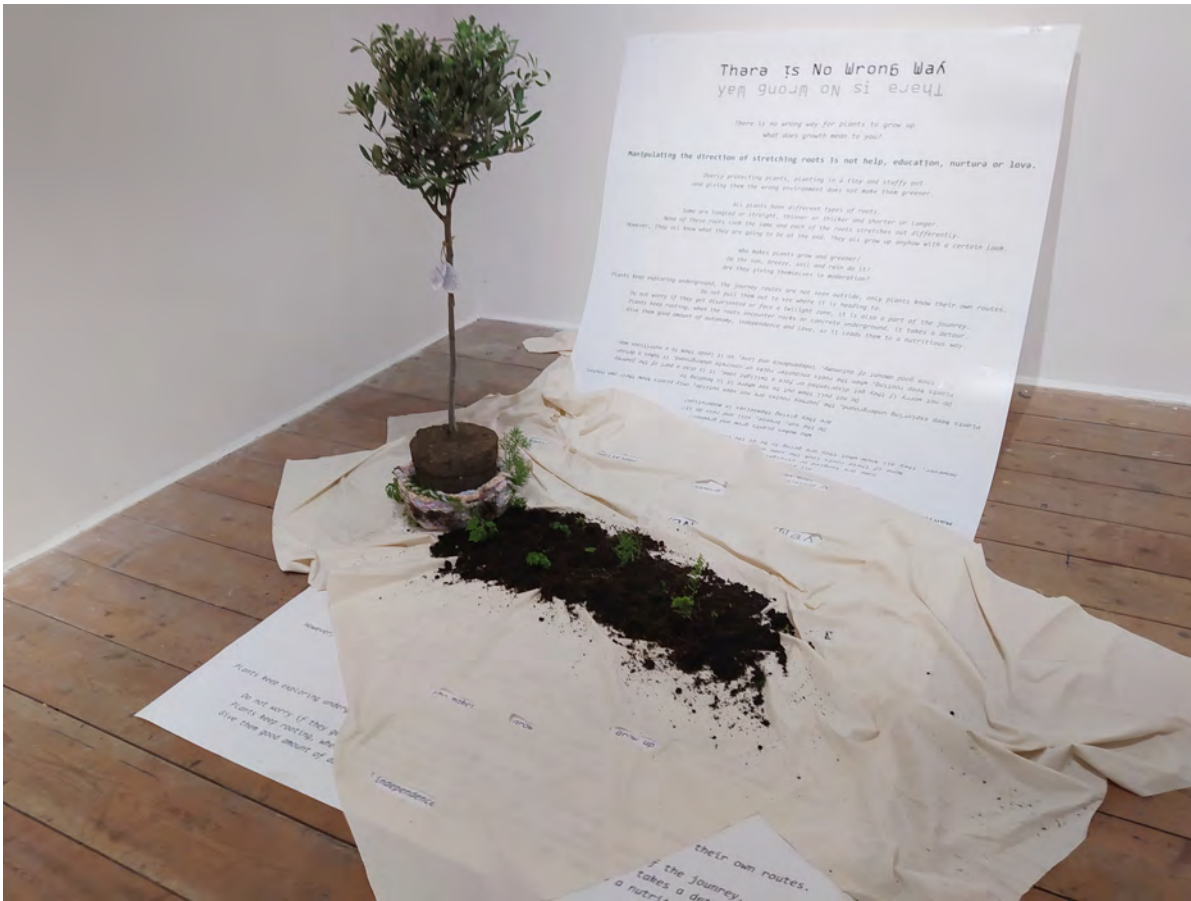

Plants keep exploring underground, the journey routes are not seen outside, only plants know their own routes.

Do not pull them out to see where it is heading to.

Do not worry if they get disoriented or face a twilight zone, it is also a part of the journey.

Plants keep rooting, when the roots encounter rocks or concrete underground, it takes a detour.

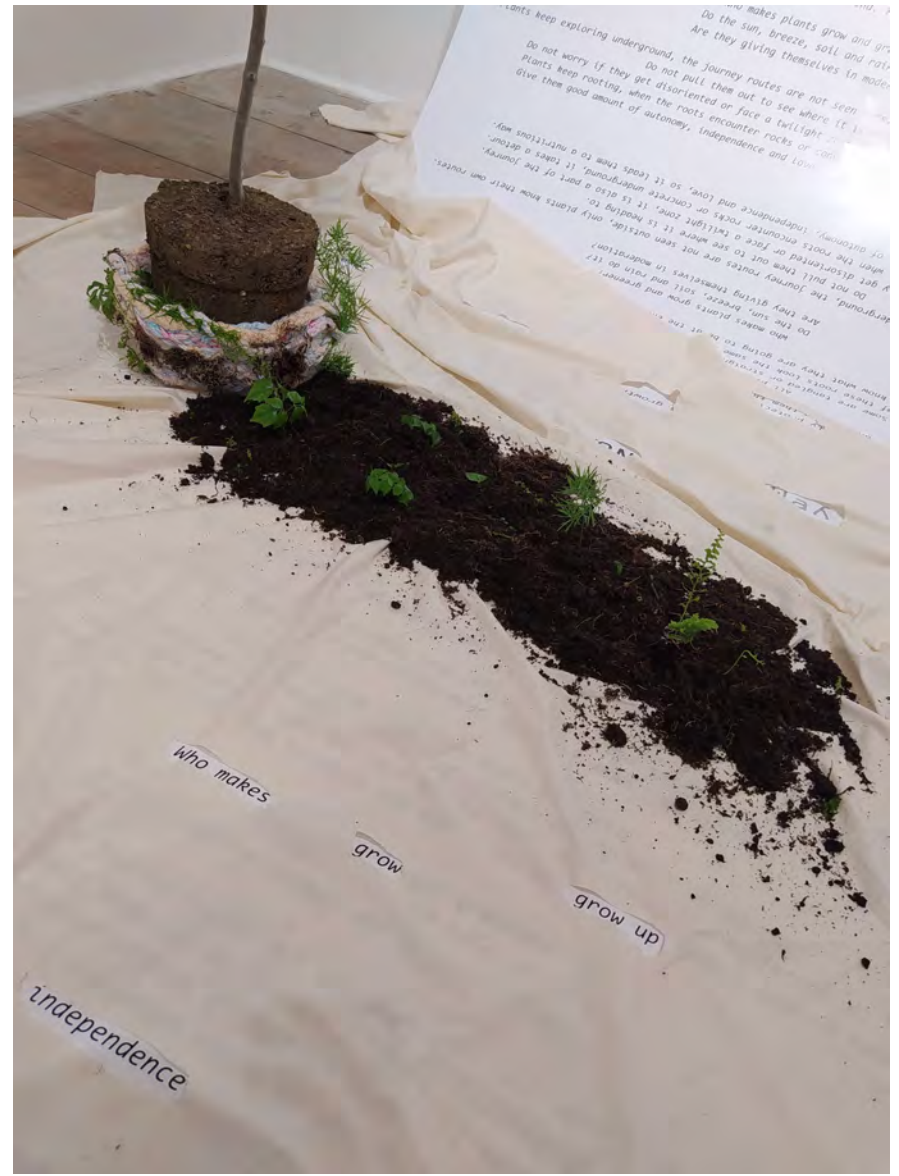

Give them good amount of autonomy, independence and love, so it leads them to a nutritious way.

Poster 1200 x 2523

Olive tree, knitting yarn, soil and plants

There is No Wrong Way 2021

UNIDENTIFIED SEED

I don't
of root

I need su
but n
I need auton
my roots
where I wa
but don't ne

Features

I am growing and
I am learning and
I will keep exploring

Care

I need love, but
don't change my direction
of rooting under the name
of love.

I need support & attention,
but not obsession.

I need autonomy & independence,
my roots can stretch
where I want to reach,
but don't neglect me.

who makes

grow
